

Care & Cleaning Instructions

All Coastal Shower Bases include NANOBATH technology (based on nanotechnology) to provide them with fungistatic, bacteriostatic (ISO 22196:2007) and hydrophobic properties. This technology consists of a topcoat application over our compound, that reacts with the element thus transforming its exterior properties. NANOBATH enhances Coastal Shower Bases with added value, which translates into many advantages for the end user:

- Greater hygiene and safety.
- Savings in water and cleaning and disinfectant products.
- Reduction in the risk of infection and reproduction of fungal growth (ideal for public areas).
- Given that these materials are inert, it is not a harmful product for the user, which means that no preventative measures have to be taken.

Follow these simple recommendations and you could enjoy your Coastal Shower Base without a care in the world for many years to come.

- For routine cleaning (after showering), simply rinse the tray with water and assure that there is sufficient ventilation in the bathroom.
- For thorough cleaning, you must rinse the tray with soap and water (or any other commercial product for cleaning bathrooms from those available on the market) and clean using a non-abrasive sponge.
- In all cases, avoid the use of cleaning or disinfecting products, that contain alcohol.
- Abrasive products (scouring pads, cloths or similar) are not at all suitable and should not be used.
- For tough stains, “magic stain removers” available in the market can be used.
